

ClamAV

The very basic configuration of ClamAV anti-virus running inside the Docker container. Anti-virus monitors and scans the directory mounted to the following path: `/mnt/DATA`. Communication with update server is performed through the mandatory VPN connection. The `config.ovpn` for VPN has to be provided and credentials env. variables set.

Setup

Set the environment variables to set on host machine:

```
ALERT_EMAIL=""           # Comma separate recipients list
SMTP_HOST=""             # e.g., smtp.gmail.com
SMTP_PORT=""             # e.g., 587
SMTP_USER=""             # your@email.com
SMTP_PASSWORD=""         # App password
VPN_USER=""              #
VPN_PASSWORD=""          #
```

Install everything by running the install script `Install.sh`.
