ClamAV

The very basic configuration of ClamAV anti-virus running inside the Docker container. Anti-virus monitors and scans the directory mounted to the following path: `/mnt/DATA`. Communication with update server is performed throught the mandatory VPN connection. The `config.ovpn` for VPN has to be provided and credentials env. variables set.

Setup

Set the environment variables to set on host machine:

```
VPN_USER=""
VPN_PASSWORD=""
```

Install everything by running the install script `Install.sh`.
